Viniferamine® Aloe Vera Inner-Leaf Gel & Grape Seed Extract

This conceptual illustration shows how aloe vera gel and grape seed extract may work together to support mature skin. Aloe-derived polysaccharides and naturally occurring constituents help maintain surface moisture, while grape seed proanthocyanidins and polyphenols provide antioxidant support. Depending on their molecular size and formulation, selected components may reach the upper epidermis, helping create a hydrated, conditioned environment that supports healthier-looking skin renewal. The illustration does not represent the precise penetration depth of individual ingredients.
